Sea Star selects Advent for Equipment Maintenance and Repair System

MURRAY HILL, NJ – Sea Star Lines has contracted Advent to provide a Maintenance and Repair system for the management of their equipment fleet. This system is the next logical step in the long standing, successful partnership between Sea Star and Advent to fully automate Sea Star Lines terminal operations.

The Equipment Maintenance and Repair System represents Sea Star's first foray into the automation of its M&R operations. It is designed to manage data for multiple terminals across multiple owners. It enables terminal management and labor to manage equipment accessing only the information they are authorized to view. This web-based system which will integrate with their existing Terminal Management System, will allow Sea Star to manage job orders and repair estimates, control equipment and parts inventories, perform sophisticated ad-hoc reporting and create invoices associated to one or many job orders.

Founded in 1995, Advent Inc. is a leader in delivering information technology solutions for the transportation industry. Advent's vast experience includes the development of global operating systems for multi-national ocean carriers, complete management systems for terminal operators, innovative transportation web sites, and transportation consulting services. Advent's suite of products also includes a Large Scale Terminal Operating System, A Web-Based Terminal Management System and a Liner Back Office System.
